v2.4.3. This rulebook is a living document.
Download the latest version at **rules.dicethrone.com**

For a thousand years, the Mad King has sat atop his high throne seeking a worthy challenger.
Each year, he hosts a tournament of champions with the greatest prize a hero could ever want: The Throne.
Over a thousand tournaments, the Mad King has never lost.
Heroes come from all corners of the globe, each with their own reasons for seeking supreme power.
Will you be the one bold enough to take The Throne?

VERSION 2.4.3

DICE THRONE

GAMEPLAY OVERVIEW

A heart-pumping, fast-playing game of skilled card play and dice manipulation. The game is played over a series of rounds where you will be rolling your Hero's dice up to 3 times. You will use the combination of dice symbols or numbers to activate your Hero's abilities to attack your opponent(s).

WINNING THE GAME

Defeat your opponents by reducing their Health to 0.

GAME SETUP

Each player should place all of their chosen Hero's components in front of them:

1. **HERO BOARD**
2. **HERO LEAFLET**
3. **TOKENS**
   - Stack your status effect and Companion tokens on your Hero Leaflet in their associated places.
4. **HEALTH DIAL**
   - Set your starting Health to (for a 1v1 game).
5. **COMBAT POINTS DIAL**
   - Set your starting CP to 2.
6. **DECK**
   - Shuffle your cards to create a deck.
   - Draw the top 4 cards from your deck. This is your starting hand.
7. **DICE**
   - Roll 1 . The player who rolls the highest number goes first and is considered the Start Player.
8. **ADDITIONAL SETUP**
   - Some Heroes require unique setup steps. If applicable, these steps will be located on the front of your Hero Leaflet under "Hero Setup".

TURN PHASES

Beginning with the Start Player, take turns as the Active Player, with each turn progressing through the following *Phases*:

1. **UPKEEP PHASE** - Resolve any *Upkeep Phase* maintenance (generally resulting from status effects or *Passive Abilities* (E)).
2. **INCOME PHASE** - Gain 1CP & draw 1 card from your deck. Start Player skips their first *Income Phase*.

3. **MAIN PHASE (1)** - Spend CP to play *Hero Upgrade* cards or *Main Phase Action* cards (pg. 8-9). Sell unwanted cards to gain 1CP for each.

4. **OFFENSIVE ROLL PHASE** - You may roll your dice up to 3 times, re-rolling any number of dice each time, to achieve a Final Dice Result that meets the Activation Requirement of a single *Offensive Ability* (reference (A) and (B)).

5. **TARGETING ROLL PHASE** - Skip this *Phase* in a 1v1 game. If you are playing with more than 2 players, see page 13.
6. **DEFENSIVE ROLL PHASE** - If you activated an *Attack* during your *Offensive Roll Phase*, your opponent may activate their *Defensive Ability* (H) with a single *Roll Attempt*.

7. **MAIN PHASE (2)** - Identical to *Main Phase (1)*.
8. **DISCARD PHASE** - Sell cards for 1CP each until you have 6 or fewer cards in your hand.

HEALTH

- The moment your Health is reduced to 0, you have been defeated.
- If all remaining players are simultaneously reduced to 0 Health, the game is a draw (an opponent cannot be 'more dead' than you).
- You may Heal up to a maximum of 10 above your starting Health.

COMBAT POINTS CP

- Combat Points (or CP) are spent primarily to play cards.
- You can have a maximum of 15CP. If you gain CP while you are already at 15CP, do not increase your CP Dial.

Note: In a standard game of Dice Throne, it is very unlikely that you will reach the CP limit with a Hero.

OFFENSIVE ABILITY (A)

- Activated after using your *Roll Attempts* during your *Offensive Roll Phase*.
- You may only activate a single ability as the result of your *Offensive Roll Phase*.

REQUIREMENT (B)

The Final Dice Result required to activate an *Offensive Ability*.

- *Offensive Abilities* generally require a specific set of symbols (B) to activate:

- **Small Straight** abilities (C) require any 4 sequential numbers in a row (e.g. 2-3-4-5) and are represented by 4 escalating dice:

- **Large Straight** abilities (D) require any 5 sequential numbers in a row (e.g. 1-2-3-4-5) and are represented by 5 escalating dice:

YOUR HERO BOARD

ABILITY DESCRIPTION (G)

- The effects to be resolved when an ability is activated.
- Dice rolled as part of the ability's effects may apply multiple times during the resolution of the ability.

DEFENSIVE ABILITY (H)

- May be activated when you are *Attacked* by an opponent.
- If you have the choice of more than one *Defensive Ability*, choose one before rolling your dice.
- The *Defensive Ability* is not activated if the incoming damage type is *undefendable*, *pure*, *collateral*, or is the result of an opponent's *Ultimate Ability* (see "Damage Types" on page 10).

DEFENSIVE DICE (I)

- The number of dice you roll when activating your *Defensive Ability*.
- For example, DEFENSE ROLL 1 means the Gunslinger rolls 1 die during her *Defensive Roll Phase*.

- These dice are only rolled a single time (you only have 1 *Roll Attempt*).

PASSIVE ABILITY (E)

Always active and/or available for use.

ULTIMATE ABILITY (F)

Your Hero's most powerful attack! If activated, the effects are completely unstoppable.

IMPORTANT: The damage and effects of an *Ultimate Ability* can be enhanced, but cannot be reduced, prevented, avoided, responded to, or interrupted by **anything** (e.g. cards, status effects, Companions, etc). Opponents may take no action of any kind from the time it is activated until the conclusion of the *Roll Phase*. The only way to prevent an *Ultimate Ability* is to alter a die roll **before** its activation.

YOUR HERO LEAFLET

Leaflet Front

STATUS EFFECTS AND COMPANIONS (A)

Rules for your Hero's status effects & Companions.

HERO SETUP (B)

Some Heroes require additional setup steps before the game begins.

DICE KEY (C)

The symbols on each face of the Hero's dice.

COMPLEXITY RATING (D)

A value between 1 and 6 that measures how difficult a Hero is to play. Higher complexity Heroes often take more time to master and require good strategy to play effectively.

RULES CLARIFICATIONS (E)

The answers to questions about complex rules for this Hero.

Leaflet Back

STATUS EFFECTS

Each Hero has a unique set of status effects (A), represented by tokens. If you need more tokens than are provided, represent them with something else.

Positive or **Negative** Status Effects can be **gained** or **inflicted** on yourself or other players. Status effects are usually gained or inflicted through cards or *Offensive Abilities*.

When you gain or inflict a status effect, take the corresponding token from your Hero Leaflet and place it in the middle of the receiving player's Hero Board (F). This status effect is now considered to be "in play".

Important: If a player is defeated, status effects they inflicted on other players remain in play.

Example (left): Cursed Pirate has inflicted a *Powder Keg* (F) and two *Wither* (H) status effects on the Gunslinger. *Wither* is marked as *Persistent* in the status effect description, so it will remain on the Gunslinger's Hero Board until the Gunslinger is able to remove it. *Wither* has a Stack Limit of 2 (G), allowing the Cursed Pirate to inflict it twice on the Gunslinger.

REMOVING STATUS EFFECTS

When a status effect is removed, return the token to the appropriate space on its Hero's Leaflet. When using cards or abilities that remove a specific number of status effects, remove that many tokens.

SPENDABLE STATUS EFFECTS

Some status effects are removed by spending them. Unless otherwise specified, you may spend these status effects at any time during any *Phase* of any player's turn and their effects are immediate.

PERSISTENT STATUS EFFECTS

A status effect marked as "*Persistent*" remains in play until a card, status effect, or ability causes it to be removed from the Hero.

STACK LIMITS

Many status effects can be applied multiple times to a Hero, creating a stack of them on a Hero Board. The Stack Limit (G) represents the maximum number of tokens of a particular status effect that can be on a single Hero Board at a given time (e.g. a status effect with a Stack Limit of 2 can have a maximum of 2 tokens on each Player).

INCREASING STACK LIMIT

If a player **increases** the Stack Limit of a status effect, the increase only applies to that player, and lasts for the duration of the game.

UNIQUE STATUS EFFECTS

These fundamentally break the standard status effect rules (explained in their description). They are considered to be neither a Positive nor Negative Status Effect. Unique Status Effects often have a custom shape and/or size (I).

INTERRUPTING STATUS EFFECTS

If a status effect is spent, its effects cannot be interrupted. For more information, see "Timing Conflicts" on page 15.

COMPANIONS

Some Heroes have Companions, which are represented by tokens, dials, or other custom components. Companions are not status effects, and are therefore immune to cards and abilities that interact with status effects (e.g. (K)).

Companions feature custom rules on the Hero Leaflet (A). They cannot be removed, transferred, or destroyed, unless otherwise specified in the Companion's ruleset.

Companions can be interrupted in the same way that status effects can be interrupted.

HERO CARDS

There are two types of cards: *Hero Upgrade* cards and *Action* cards.

If you ever need to draw a card, but your deck is empty, shuffle your Discard Pile to create a new deck first.

Playing cards costs Combat Points (CP). This cost is indicated on the left hand side of the card. Cards costing 0CP are free to play.

You cannot end your turn with more than 6 cards in your hand. During the *Discard Phase*, you must sell cards until you have 6 or fewer cards.

To sell a card, place it onto your Discard Pile and increase your CP Dial by 1CP (all cards are worth 1CP when sold, no matter how much they cost to play).

The *Phase* during which a card may be played is indicated by the symbol on the left hand side of the card (J).

HERO UPGRADES

Hero Upgrade cards permanently upgrade the space with the same name on your Hero Board. Identified by a ▲ icon on the left side of the card.

Offensive Ability upgrades (A) have a white border, *Defensive Ability* upgrades (B) have a green border, and *Passive Ability* upgrades (C) have a purple border.

Hero Upgrade cards:

- May only be played during your *Main Phase (1)* or *Main Phase (2)*.
- May not be sold or discarded after they have been played.
- May be upgraded directly to level III. If upgrading an already upgraded ability (i.e. upgrading from level II to level III), play the new card over the top of the previous *Hero Upgrade* and pay only the difference in CP cost between the upgrades.

Offensive Ability Upgrade | Defensive Ability Upgrade | Passive Ability Upgrade

TO PLAY AN UPGRADE CARD

1. Spend the required CP (shown on the left side of the card).
2. Place the card onto the space of your Hero Board with the same name.
3. Some Hero Upgrades grant new secondary abilities. These are additional abilities that your Hero can now activate during their turn. You can still only activate one ability per *Offensive Roll Phase*!

ACTION CARDS

Action cards (identified by a ★ icon) are single use cards that provide a benefit. *Action* cards may be played at different times, depending on their color.

TO PLAY AN ACTION CARD

1. Spend the required CP (shown on the left side of the card).
2. Perform the described action and then place the card onto your Discard Pile.

INSTANT ! ACTION CARDS

- Identified by a red border and a ★ icon.
- May be played at any time, during any player's turn (as indicated by the ! icon on the left side of the card).
- May be played to interrupt any other action or ability (except other *Instant Actions*), and are resolved immediately. The interrupted action or ability completes afterwards (see "Timing Conflicts" on page 15).
- *Instant Action* cards cannot be interrupted.

MAIN PHASE (M) ACTION CARDS

- Identified by a blue border and a ★ icon.
- Only playable on your own turn, during *Main Phase (1)* or *Main Phase (2)* (as indicated by the (M) icon on the left side of the card).

ROLL PHASE ACTION CARDS

- Identified by an orange border and a ★ icon.
- May be played during any player's turn in the *Offensive Roll Phase*, *Defensive Roll Phase*, or *Targeting Roll Phase* (as indicated by the icon on the left side of the card).
- *Roll Phase Action* cards cannot be interrupted.

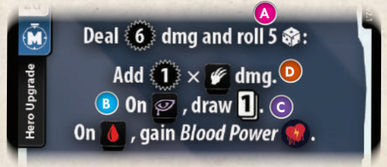

RESOLVING TEXT

"ROLL [#] "

Roll the indicated number of dice (A) a single time, then resolve the effects that follow. Dice rolled previously cannot be used to resolve the listed effects.

"ON [SYMBOL]"

If your roll contains the symbol shown (B), you get the listed benefits (C). However, you only get these benefits *once*, even if your roll contains the required result multiple times.

"THEN"

You may spend status effects and play *Instant Action* cards or *Roll Phase Action* cards at the point of a 'Then' statement.

The effect following a 'Then' statement is performed after the effects that came before it.

MULTIPLICATION (e.g. "4 × ")

Multiply the [number] by the [quantity] of your dice displaying the symbol (D) to determine the total.

"FOR EVERY"

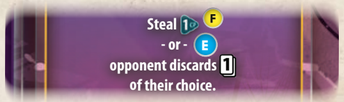

If your roll contains the symbols shown, you perform the listed effect each time they are rolled.

This means that if your dice are displaying the symbol four times, you would resolve the effect a total of two times.

"OR"

When statements are separated by an "or" (E), you may resolve only one of the options.

"STEAL"

Take the indicated resource from your opponent and give it to yourself (F). If your opponent does not have the specified amount, Steal as much as they have.

When Stealing Health/CP, increase your Health/CP Dial and reduce their dial accordingly.

If your opponent does not have the specified amount, Steal as much as they have.

DAMAGE TYPES

The current amount of damage waiting to be dealt to a player is considered "incoming damage".

There are 5 damage types: normal (denoted as simply "dmg"), *undefendable*, *pure*, *collateral*, and *ultimate*.

DAMAGE TYPE ATTRIBUTES

Each damage type has one or more of the following attributes:

- **Defendable -** If the damage is the result of your opponent's *Offensive Ability*, you may perform your *Defensive Ability*.
- **Avoidable -** Can be reduced, prevented, avoided, or interrupted by cards and/or status effects.
- **Modifiable -** Can be changed with *Attack Modifiers*.
- **Special Targeting Rules** - The player to receive the damage is specified in the description. No *Targeting Roll Phase* is necessary to determine who will receive this damage.

NORMAL DAMAGE

- This is the most common type of damage, denoted by a black circle with a number in it (e.g. 5) followed by "dmg".
- Defendable, Avoidable, and Modifiable.
- No Special Targeting Rules.

UNDEFENDABLE DAMAGE

- Another common type of damage denoted by a red circle with a number in it (e.g. 2) followed by "*undefendable* dmg".
- Not Defendable, but it is Avoidable (with cards / status effects) and Modifiable. No Special Targeting Rules.

PURE DAMAGE

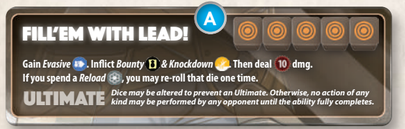

- A special type of *undefendable* damage denoted by a red circle with a number in it (e.g. 2) followed by "*pure* dmg".
- Not Defendable, but it is Avoidable.
- Not Modifiable.
- No Special Targeting Rules.

COLLATERAL DAMAGE

- A special type of *undefendable* damage denoted by a red circle with a number in it (e.g. 2) followed by "*collateral* dmg".
- Not Defendable, but it is Avoidable.
- Not Modifiable.
- Has Special Targeting Rules (specified on the ability/card).
- Does not qualify as an *Attack* since it does not directly target.
- When dealt to multiple players of the same team at the same time, reduce the Health Dial by the combined total dealt.

ULTIMATE DAMAGE

- A special type of *undefendable* damage dealt by your *Ultimate Ability* A.
- Denoted by a red circle with a number in it (e.g. 2).
- Not Defendable or Avoidable.
- Modifiable, but may only be increased, never decreased.
- No Special Targeting Rules.

Gunslinger's *Ultimate Ability*

DAMAGE TYPE CHART

	Defendable	Avoidable	Modifiable	Special Targeting Rules
NORMAL DAMAGE	✓	✓	✓	✗
UNDEFENDABLE DAMAGE	✗	✓	✓	✗
PURE DAMAGE	✗	✓	✗	✗
COLLATERAL DAMAGE	✗	✓	✗	✓
ULTIMATE DAMAGE	✗	✗	✓	✗

ATTACK MODIFIERS

Any card or status effect that modifies an *Attack* is considered an "Attack Modifier."

Can be played before or after the *Defensive Ability* is activated.

Damage added by *Attack Modifiers* is considered to be of the same damage type as the original damage being dealt.

Attack Modifiers can only be used on *Attacks* (i.e. an *Offensive Ability* that targets an opponent with at least 1 dmg).

Note: *Attack Modifiers* can only be played on an *Attack* you are activating during your turn (unless otherwise noted).

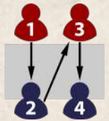

3-4 PLAYER GAMES

When playing with more than two players, the player whose turn it is has priority when performing *Actions*, followed by subsequent players in turn order. After all interruptions are complete, the previous order of play continues normally.

2V2 TEAM GAME

When playing with 4 players, apply the following rule changes:

- The game is played in teams of two.
- Teammates sit next to each other and are encouraged to view each other's hands and strategize.
- Roll to determine the Start Player.
- Turn order alternates between teams in a zigzag pattern.
- Teammates share one Health Dial beginning with Health.
- The Start Player skips the *Income Phase* of their first turn.
- When one teammate receives damage, reduce the shared Health Dial by the corresponding amount. If both teammates take damage at the same time, reduce the Health Dial by the combined total of damage taken by both teammates.
- Teammates still have their own individual CP Dials. A player's CP may only be spent on their own cards and abilities.
- Players cannot intervene to reduce their teammates incoming damage unless specified by a card/status effect (e.g. the *Roll Phase Action* card **NOT THIS TIME!** can be played on teammates because it refers to "a chosen player").
- Players may alter dice to prevent a teammate from taking damage in the first place or to improve their dice outcome.

KING OF THE HILL

When playing with 3 players, apply the following rule changes:

- Each player begins the game with Health.
- Roll to determine the Start Player.
- The Start Player skips the *Income Phase* of their first turn.
- Players take turns in a clockwise order.
- When *Attacking*, you may target any player desired. However, you receive a bonus card if you choose to *Attack* the Leader.
- The player(s) with the most Health remaining are considered the Leader(s).
- If you target a Leader with an *Attack*, you draw 1 card from your deck. This card draw happens immediately after choosing your target (before any other effects occur).
- If you *Attack* an opponent who is tied with you for the lead, (e.g. you and another player both have 30 Health), you still draw 1 bonus card.
- If you are the only Leader (i.e. you alone have the most Health), you cannot earn a bonus card.
- When the game is down to 2 players, these rules still apply.

5-6 PLAYER GAMES

Dice Throne can be played with up to 6 players. However, **we strongly recommend that your group does not attempt this until everyone is very familiar with the game**. 5-6 player games are fun and intense for seasoned players, but will drag on if attempted by new players.

For full rules on 5-6 player games (and other variants), visit: **http://variants.dicethrone.com**

TURN BREAKDOWN

At this point you should have enough knowledge of how Dice Throne works to try out a 1v1 game. We recommend you return to this reference section when you have a question.

The following is a detailed breakdown of each *Phase* of a turn.

1. UPKEEP PHASE

1. Determine if any of your status effects, abilities, or Companions activate during your *Upkeep Phase*. Then resolve these effects.
   Note: this will not be applicable for most Heroes during the beginning of the game.
2. If there are multiple effects, the Active Player may choose the order in which they are resolved.
3. All damage is accumulated and is applied simultaneously at the conclusion of the *Phase*.

2. INCOME PHASE

Important: The Start Player skips the *Income Phase* of their first turn.

1. Increase your CP Dial by 1 (skip this step if you already have the maximum of 15).
2. Draw 1 card from the top of your deck and add it to your hand. If your deck is empty, shuffle your Discard Pile to create a new deck.

3. MAIN PHASE (1) (M)

Perform any of the options below in any order, and as many times as you like:

A. Sell any card

- Place 1 card from your hand onto your Discard Pile.
- Increase your CP Dial by 1 (all cards are worth 1 when sold, no matter how much it costs to play).

B. Play *Main Phase Action* cards ★

- Reduce your CP Dial by the CP cost shown on the left side of the card.
- Perform the described action(s).
- Place the card onto your Discard Pile.

C. Play *Hero Upgrade* cards ⬆

- Reduce your CP Dial by the CP cost shown on the left side of the card.
- If you are upgrading from level II to level III, only pay the difference in cost.
- Place the card onto the correspondingly named space on your Hero Board.

4. OFFENSIVE ROLL PHASE

1. **Perform up to 3 *Roll Attempts*:**
   - Roll all of your dice.
   - Optional: re-roll any number of dice.
   - Optional: for a second time, re-roll any number of dice.

2. **When you are satisfied with your roll, you may either:**
   - Announce the *Offensive Ability* that you intend to Activate (your Final Dice Result must meet its Activation Requirement). Ask your opponent if they would like to alter your dice or allow the ability to activate successfully.
   - Announce that you are not going to Activate an *Offensive Ability* at all.
   - **Tip:** Activating a weak *Attack* against an opponent with a powerful *Defensive Ability* is not always advisable.
3. **If you, a teammate, or an opponent have altered any of your dice or performed an action, (e.g. someone played the TWICE AS WILD! card), you may either:**
   - Announce a different *Offensive Ability* based on the current Final Dice Results.
   - Return to step 1 of the *Offensive Roll Phase* and use any remaining unused re-rolls.
4. **Activate the *Offensive Ability* (if one was chosen):**
   - Determine its variable effects (some abilities require additional steps to determine their full effects).
   - Resolve any effects that do not require a target (e.g. gain *Evasive*, gain 1, Heal 5, etc).

5. TARGETING ROLL PHASE

If you have only one opponent, you must target this opponent, so this *Phase* is **skipped**.

If you have **more than one opponent**, you must determine your target.

Note: Some *Offensive Abilities* deal no damage, but have other effects that require a target (e.g. **MARK THE TARGET** inflicts *Bounty* 1). This occurs during step 1 of the *Defensive Roll Phase*.

In King of the Hill variants, simply choose an opponent to target (see "King of the Hill" on page 11).

To decide who the Defender will be in 2v2 games:

1. **Roll 1 die.**

   This die may be manipulated with cards, unless the *Attack* is an *Ultimate Ability*. Dice could have been manipulated before an *Ultimate Ability* is activated, but as this is now the *Targeting Roll Phase*, the *Ultimate Ability* has already activated and simply requires a target.

2. **Determine the Defender who will be receiving the damage based on the result of your die roll:**
   - **1 or 2** - Target the opponent on your left.
   - **3 or 4** - Target the opponent on your right.
   - **5** - Your opponents choose which of them you target.
   - **6** - Choose either opponent as your target.

Note: For targeting rules on other variants, visit: **variants.dicethrone.com**

6. DEFENSIVE ROLL PHASE

The targeted opponent now begins the *Defensive Roll Phase*.

1. Resolve any effects from the *Offensive Ability* that require a target and are not damage related (e.g. inflict *Bounty* 1, Steal CP, etc).
2. If the *Offensive Ability* results in an *Attack* and the damage type is defendable, the Defender may choose to activate their *Defensive Ability*.

   Note: Most Heroes only have 1 *Defensive Ability*. However, if a Hero has 2, they must choose which one to activate now.

   If the damage type is not defendable, skip to step 5.
3. The Defender now performs 1 *Roll Attempt* with the indicated number of dice on their *Defensive Ability* (e.g. DEFENSE ROLL 1 means roll 1 die).
4. Based on the dice results, the Defender resolves all non-damage effects (e.g. gain *Synth* 1, gain CP, Heal 2, Steal 1 Health, etc).
5. There is one last opportunity (in player turn order) for any player to spend status effects or play cards.
6. Finally, all damage and prevention effects are accumulated and are applied simultaneously.

   Note: If all remaining players are simultaneously reduced to 0 Health, the game is a draw.
7. At this point, resolve effects that require (a) "dmg to be successfully dealt", (b) status effects to be removed at the end of the *Roll Phase*, or (c) you to gain/inflict status effects that occur after damage calculations (due to a "then" statement). For a full list of these interactions, visit **advanced rules.dicethrone.com**

7. MAIN PHASE (2) (M)

Identical to *Main Phase (1)*.

8. DISCARD PHASE

1. Sell cards from your hand, until you have 6 or fewer cards.
2. Increase your CP Dial by 1 for each card sold (more expensive cards are not worth more CP).
3. Place any sold cards onto your Discard Pile.

Note: No other actions can be performed during this *Phase* except selling cards from your hand.

DISCARD PILE
(face up)

The following 2 pages are intended for advanced players and tournament play. This knowledge is not required to play the game casually. Other Advanced Rules can be viewed at advancedrules.dicethrone.com.

FINAL DMG TOTAL

Occasionally, calculating a Final Total of damage (the amount you reduce your Health Dial by at the conclusion of the *Roll Phase*) can become complex when the incoming damage of the *Attack* is affected by your *Defensive Ability*, cards, and status effects played by you and your opponent.

Luckily, you can easily calculate the Final Total by following the steps below, in the order shown, after both players are completely finished taking actions:

1. DETERMINE INCOMING DAMAGE

Incoming damage is the amount of damage that is waiting to be dealt to you at any point during the game. Most frequently this damage comes from *Offensive* and *Defensive Abilities*, but incoming damage can also come from status effects like the Pyromancer's *Burn* or the Shadow Thief's *Poison*.

2. ADD & SUBTRACT (SUBTOTAL)

We now apply anything that used addition or subtraction to affect incoming damage. *Defensive Abilities*, status effects, or cards that would subtract (prevent) or add a **specific** amount of damage are applied to incoming damage during this step. The result is called the incoming damage Subtotal.

3. MULTIPLY & DIVIDE (FINAL TOTAL)

Finally, calculate anything that affects incoming damage using multiplication or division. All division and multiplication is **applied at the end**, regardless of what order cards, status effects, or *Defensive Abilities* were activated.

Also, in the case that you need to calculate more than one multiplier, each multiplier is calculated independently using the original incoming damage Subtotal determined by Step 2.

Anything else that uses incoming damage as part of a multiplication or division calculation (e.g. the Paladin's *Retribution* status effect) is also calculated at this time.

BARBARIAN VS PALADIN EXAMPLE

Below is an example of a series of events that transpire during the *Offensive* and *Defensive Roll Phase* between the Barbarian (attacking) and the Paladin (defending).

1. Barbarian activates his **OVERPOWER** *Offensive Ability*, which will deal 18 damage to the Paladin.
2. Paladin spends his *Retribution* status effect, which will deal half of the incoming damage back to the Barbarian.
3. Paladin spends his *Protect* status effect, which will prevent ½ of the incoming damage.
4. Paladin activates his **DIVINE DEFENSE III** *Defensive Ability*, which will prevent 3 dmg and gain a *Protect*.
5. Barbarian plays his **GET SOME** *Attack Modifier* card which inflicts *Concussion* and adds 5 dmg.
6. Paladin plays his **ABSOLUTION** card, which will prevent 3 dmg.
7. Paladin spends his second *Protect*, which will again prevent ½ of the incoming damage.

BARBARIAN VS PALADIN EXAMPLE (CONTINUED)

A lot of stuff just happened. Let's calculate damage:

1. DETERMINE INCOMING DAMAGE

18 incoming damage from the Barbarian's **OVERPOWER** (Event 1, above).

2. ADD & SUBTRACT (SUBTOTAL)

18 incoming damage (Event 1 - **OVERPOWER**)
- 3 dmg (Event 4 - **DIVINE DEFENSE III**)
5 dmg (Event 5 - **GET SOME**)
- 3 dmg (Event 6 - **ABSOLUTION**)

17 incoming damage (Subtotal)

3. MULTIPLY & DIVIDE (FINAL TOTAL)

Determine the value of each multiplier simultaneously and independently.
Note: all division in Dice Throne is always rounded up.

Event 2 (*Retribution*) = 17 (Subtotal) ÷ 2 = 9 dmg
Event 3 (*Protect*) = 17 (Subtotal) ÷ 2 = 9
Event 7 (*Protect*) = 17 (Subtotal) ÷ 2 = 9

Then apply all of this to the Subtotal:

17 incoming damage - 9 - 9 = **-1** incoming damage

Using *Protect* twice, the Paladin prevents all damage, which means the Final Total of damage the Paladin receives is 0.

Additionally, the Barbarian will receive 9 dmg in return since the Paladin spent his *Retribution* token (Event 2).

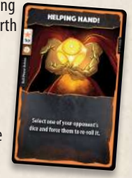

TIMING OF ACTIONS

This section contains advanced rules about the specific timing when rolling dice and for other various *Actions*, effects and abilities. Additional explanations, examples, and advanced rules questions can be viewed at **advancedrules.dicethrone.com**.

ROLLING YOUR DICE

When a player is rolling dice (for any reason), including when they are using their *Roll Attempts* to activate an *Offensive Ability* or a *Defensive Ability* or when rolling a status effect die (e.g. *Evasive*), the Player rolling these dice can alter and re-roll these dice without being interrupted by their opponent. They can use any valid *Instant Action* cards, *Roll Phase Action* cards, status effects, or abilities, and cannot be interrupted by their opponent.

Once a player has finished altering or re-rolling their dice, they will then declare their intention. At this point, their opponent can alter the dice result, after which the rolling player may respond. This will go back and forth until all players accept the results.

Dice may always be altered, including dice rolled by any type of *Action* card and status effect so long as the card is used in the appropriate *Phase* (e.g. an *Evasive* die being re-rolled due to the *Roll Phase Action* card **HELPING HAND!**).

The one and only time you cannot alter dice is when **resolving effects of a successfully activated *Ultimate Ability*** (e.g. the Gunslinger spending and rolling a die for their *Reload* status effect, etc).

SIMULTANEOUS ACTIONS

Multiple players may want to perform *Instant Actions* at the same time. This can cause confusion as to whose *Action(s)* should be resolved first. **The player whose turn it is has priority**, regardless of who initiated their *Action* first or how many *Actions* a player wants to perform at this time.

Important: Spending a status effect or activating/ spending a Companion is considered an *Instant Action*!

For example, if your opponent wants to avoid your *Attack* by spending *Evasive*, and then you play the *Instant Action* card **BUH, BYE!** to remove your opponent's *Evasive*, your card would resolve first, because it's your turn.

Once initiated, these *Actions* must be fully completed and **cannot** be interrupted

For example, you must resolve the first *Evasive* token that was spent before a second *Evasive* may be spent.

Main Phase Action cards and Hero abilities are different from *Instant Actions* or *Roll Phase Actions* as they are not considered "instant" and **can** be interrupted.

For example, when you play the *Main Phase Action* card **WHAT STATUS EFFECTS?**, your opponent may still spend valid status effects before the card resolves completely (e.g. *Tactical Advantage*, *Nyra's Bond*, etc).

Similarly, you and your opponent may roll dice for the Gunslinger's **DUEL** *Defensive Ability*, and then the Gunslinger may interrupt it's resolution to spend an *Evasive* before resolving the result of the initial die roll.

CREDITS (2024)

Game design: Nate Chatellier, Manny Trembley, Gavan Brown

Game development: Nate Chatellier, John Heidrich

Graphic design: Gavan Brown, Gui Landgraf, Britt Anderson, Nick Malara

Illustration: Manny Trembley, Nick Malara, Britt Anderson

Operations: Aaron Waltmann, Jeff Beal

QUICK REFERENCE

2/3/4/5-of-a-kind: When the dice show the same number (not symbol) 2/3/4/5 times.

Additionally: Statements following an "Additionally" resolve after the other listed effects.

Attack: An *Offensive Ability* that deals at least 1 non-*collateral* dmg to an opponent.

Attack Modifier: A status effect or card that adds an effect to an *Attack* and / or modifies its damage.

Collateral Damage: Damage with special targeting rules that does not qualify as an *Attack*. Not defendable or modifiable, but may still be avoided or prevented.

Combat Points CP: Spent to play cards. Players can have a maximum of 15 CP. Players gain 1 CP during their *Income Phase* (except the Start Player's first turn).

Companion: Reference your Hero Leaflet for their unique definition (see "Companions" on page 7).

Defender: The player who is being targeted by an *Attack*.

Final Dice Result: The result of your five dice after all and dice modification are finished.

Gain: For status effects, take the corresponding token and place it on the middle of your Hero Board. For Health or CP, increase your Health or CP Dial by the specified amount.

Heal: Increase your Health Dial by the specified amount. You may Heal up to 10 Health beyond your starting Health.

Incoming damage: The current amount of damage waiting to be dealt to a player.

Inflict: Take the status effect's corresponding token and place it in the middle of the receiving player's Hero Board.

Instant Action card: An *Action* card that may be played at any time during any player's turn. These cards can interrupt normal play, but not another *Instant Action / Roll Phase Action* card or status effects (which are considered *Instant Actions*).

Isolated Damage: Damage that is dealt immediately and may only be prevented or avoided as a separate instance of dmg.

Large Straight: 5 of your dice show a sequence of numbers (i.e. 1-2-3-4-5 or 2-3-4-5-6).

Main Phase Action card: An *Action* card that may be played during the Active Player's *Main Phase (1)* or *Main Phase (2)*.

On [symbol]: If your roll contains the required symbol(s), you get the benefits. Even if your roll contains the required symbol(s) multiple times, you only get the benefits once.

Or: When statements are separated by an "or", you may resolve only one of the separated statements.

Persistent Status Effects: Remain in play until some other card or ability causes their removal.

Pure Damage: *Undefendable* damage that cannot be modified, but can be avoided or prevented.

Roll Attempt: A dice roll performed by the player to activate an *Offensive* or *Defensive Ability*.

Roll Phase Action card: An *Action* card that may be played during the *Offensive / Targeting / Defensive Roll Phase*. These cards can interrupt normal play, but not another *Instant Action / Roll Phase Action* card or status effects.

Roll Phase: If an ability references "the conclusion of the *Roll Phase*," this occurs at the very end of the *Roll Phase*.

Roll [#]: Roll the indicated number of dice to resolve the listed effects.

Sell: During a player's *Main Phase*, they may take any card from their hand, place it onto their Discard Pile, and then gain 1 CP (i.e. increase their CP Dial by 1 CP).

Small Straight: 4 of your dice show a sequence of numbers (i.e. 1-2-3-4 or 2-3-4-5 or 3-4-5-6).

Spendable Status Effects: Remain in play until you choose to spend them.

Spent / Spend: If a status effect is spent, you remove the token and receive the benefit. This has no CP cost. You may gain this status effect token again later in the game.

Stack Limit: Specifies how many tokens of the same type can be on any one Hero at any time (unless a card or ability increases that limit).

Steal: Take the indicated resource from your opponent and give it to yourself. If your opponent does not have the specified amount, Steal as much as they have.

Then: "Then" statements create a break in play during which players may play *Instant Action* cards, *Roll Phase Action* cards, or spend status effects. Statements following a "Then" are always resolved after the statements preceding the "Then".

Ultimate Ability: Opponents CANNOT DO ANYTHING until the ability completes. This includes preventing, responding to, or interrupting its damage and effects. The ability also ignores any status effects in play that would reduce the effectiveness of the ability. The ability can be modified by the Active Player. The only way to prevent an *Ultimate Ability* or avoid its damage is to alter a die roll to stop its activation.

Undefendable Damage: Damage which players cannot activate a *Defensive Ability* against. However, the damage may still be avoided, prevented, or modified.

Unique Status Effects: Contain rules in their description that break the normal rules for status effects.
